Executive Summary

Computer Science graduate (BE, 2026) with hands-on experience in AI/ML development, full stack web development, and REST API integration. Built and deployed a CNN-based plant disease detection system with a Flask backend, along with multiple responsive web applications spanning e-commerce, registration workflows, and portfolio platforms. Comfortable working across the stack – from training and integrating ML models to designing clean, mobile-first front ends and deploying them on platforms like Vercel and Firebase. Certified in Python, Generative AI, Machine Learning, and Cloud Computing, with recognition including a 3rd Prize at a college Project Expo. Actively seeking an entry-level IT/Software Development role to apply these skills and deliver impactful, production-ready solutions.

Technical Skills

Languages: Python, JavaScript, HTML5, CSS3
Frameworks/Libraries: Flask, MobileNetV2, CNN, SVM, REST APIs
AI/ML Tools: Google AI Studio, Deepseek, Claude, TensorFlow/Keras basics
Tools & Platforms: Git, GitHub, Visual Studio Code, Vercel, Firebase, MongoDB, MS Excel, MS Word, PowerPoint
Cloud & Other: AWS Fundamentals, Cloud Computing basics, Data Visualization
Soft Skills: Team collaboration, Problem-solving, Communication, Leadership

Projects

AI-Powered Plant Disease Detection & Treatment Recommendation System | *Live Demo* **Feb 2026**

- Built an end-to-end web app where users upload a leaf photo and receive a disease diagnosis within seconds.
- Used a CNN (MobileNetV2) to extract visual features, then passed them into an SVM classifier to identify the disease across multiple classes.
- Wrote a Flask REST API to handle image uploads, run inference, and return structured JSON responses with confidence and severity scoring.
- Added organic/chemical treatment recommendations and tested edge cases like low-confidence and out-of-distribution leaf images.

Grocery Website | *Live Demo* **July 2025**

- Built a fully responsive grocery e-commerce site (HTML, CSS, JS), optimized for both desktop and mobile.
- Structured the product catalog into organized categories with intuitive search and add-to-cart functionality, and highlighted seasonal produce to boost engagement.

Online Course Reservation System | *Live Demo* **June 2025**

- Designed and deployed a course registration system (HTML, CSS, JS) with a clean, user-friendly interface.
- Implemented client-side form validation with real-time error feedback and simulated backend data-handling logic to demonstrate the full registration workflow.

Personal Portfolio Website | *Live Demo* **2025**

- Designed and deployed a modern, fully responsive portfolio site showcasing projects, skills, and certifications.
- Optimized UI/UX with smooth navigation, mobile-first layout, and fast load performance via Vercel deployment; integrated a downloadable résumé and contact section.

Education

The Kavery Engineering College **2022 – 2026**
BE Computer Science – CGPA: 8.87/10 *Salem, Tamil Nadu*

GHSS Panankattur **2022**
HSC (12th Grade) – 64% *Omalur, Salem, Tamil Nadu*

SIMS P Kalipatti **2020**
SSLC (10th Grade) – 71% *Omalur, Salem, Tamil Nadu*

Address

Panankadu, U Maramangalam (PO), Pincode-636503, Omalur (TK), Salem (DT), Tamil Nadu.
