Career Objective

Information Technology graduate with strong verbal and written communication skills, a customer-focused mindset, and solid computer proficiency built through hands-on software projects. Experienced in working with structured data, resolving edge cases, and explaining technical outcomes clearly to non-technical users – skills directly transferable to customer interaction and query resolution. A quick learner who has adapted fast in a professional internship setting, comfortable following structured processes and meeting deadlines. Looking to bring strong communication, multitasking, and adaptability to an entry-level Customer Support / BPO (voice or non-voice process) role, with the flexibility to work rotational shifts and a genuine interest in building a long-term career in customer service.

Key Skills

Communication: Verbal & Written English, Active Listening, Customer Handling, Email & Chat Etiquette
Computer Proficiency: MS Office basics, Typing & Data Entry, Email Handling, Internet Research, Quick to Learn New Software
Process Skills: Voice & Non-Voice Process (Fresher), Documentation, Query Resolution, Multitasking, Ticket/Case Handling
Technical Aptitude: Java, Python, JavaScript, REST APIs, SDLC, Agile
Soft Skills: Team Collaboration, Problem-Solving, Time Management, Adaptability, Attention to Detail, Positive Attitude

Education

Paavai Engineering College **2022 – 2026**
B.Tech. Information Technology

South Indian Matriculation Higher Secondary School **2022**
HSC – 72%

South Indian Matriculation Higher Secondary School **2020**
SSLC – 71%

Internship

Ragul's Enterprise (Infyrec – Infinity Research Center) **Jan 20, 2025 – Feb 5, 2025**
Backend Engineering Intern

- Completed a structured, hands-on internship program, adapting quickly to a new work environment, following defined processes, and meeting program timelines.
- Worked on backend logic and data handling tasks, gaining practical experience in accurate, detail-oriented, process-driven work under supervision.

Key Projects

AI-Powered Tax Calculator | *Python, Machine Learning, Web Development*

- Built a full-stack tool that takes user-entered financial data and instantly returns clear, structured, easy-to-understand results – reflecting strong attention to detail and accurate data handling.
- Designed the interface so non-technical users could enter data and interpret their results without confusion, focusing on clarity and user experience.
- Validated all outputs against real-world tax rules to minimize errors, demonstrating a careful, quality-focused approach to work.

Full Stack Web Applications (Mini Projects) | *React.js, Node.js, REST APIs*

- Developed multiple applications independently, staying organized and managing tasks from start to completion within self-set timelines.
- Practiced version control and documentation using Git and GitHub, supporting collaborative, team-based project work.

Achievements & Extracurricular Activities

- Awarded Best Teamwork recognition for collaborative academic project presentations at Paavai Engineering College.
- Applied structured problem-solving to real-world financial scenarios through the AI-Powered Tax Calculator project.
- Successfully delivered multiple mini-projects end-to-end, demonstrating reliability, initiative, and consistent follow-through.
- Actively coordinated team projects, contributing to planning, communication, and group discussions.
